Re: Finance Transformation Senior Associate – Financial Operations

PricewaterhouseCoopers (PwC)

My name is Sikai Yang—a trilingual CPA and Business Analytics candidate graduating from the University of Florida in December 2026. With more than four years of hands-on experience at Deloitte across internal controls, SOX, and external audit, combined with advanced training in Python, SQL, and AI-driven analytics, I offer PwC's Financial Operations practice the rare combination of deep financial-process expertise and modern data science capability.

As a Semi-Senior Internal Control Consultant at Deloitte's Strategy, Risk & Transactions department, I designed and implemented more than 20 internal control mechanisms across record-to-report, procure-to-pay, and order-to-cash cycles for Tier-1 automotive and technology clients. I led SOC 1 and SOC 2 readiness engagements—reviewing process documentation, IT controls, and cybersecurity procedures—and worked directly with CFOs and controllers to implement risk-mitigation frameworks that reduced operational and compliance exposure across multiple business units. This experience maps directly to PwC's core service areas of finance process optimization and ERP-enabled transformation.

During my time as a Semi-Senior External Auditor at Deloitte, I led Tier-3 financial audit engagements from risk assessment through final reporting, supervising junior auditors while executing substantive testing on revenue, cash, receivables, and fixed assets for clients with more than \$10 million in annual revenue. I also prepared AML compliance procedures and regulatory-reporting documentation for insurance-sector clients—experience that strengthens my ability to support PwC clients navigating complex financial transformation initiatives.

My current M.S. in Business Analytics practicum with Bank of America has expanded my toolkit to include Python-based machine learning, Power BI dashboard development, and cloud-based data engineering—capabilities I am eager to apply within PwC's digital finance transformation practice. I have consistently mentored junior colleagues, led cross-functional bilingual teams using Agile, and communicated complex findings clearly to executive audiences across multiple industries.

PwC's commitment to purpose-led leadership and its investment in GenAI-powered finance transformation represent exactly the kind of forward-looking environment where I want to grow. I am excited about the opportunity to help PwC clients unlock efficiency and strategic value across their finance functions. Thank you for your time and consideration—I look forward to the possibility of contributing to your team.

Sincerely,

Sikai Yang
