JPMorgan Chase  
Treasury and Chief Investment Office  
Newark, DE 19713

Dear Hiring Manager,

I am Sikai Yang, a Master's candidate in Business Analytics from the University of Florida (graduating December 2026) and a Certified Public Accountant with 4+ years of progressive experience in financial reporting, risk data management, and control implementation. I am excited about the Risk Reporting Analyst position within the Structural Interest Rate Reporting (SIRR) Operations team because it represents an ideal intersection of my financial acumen, risk reporting expertise, and technical capabilities in SQL, Python, and Tableau. My audit and controls background, combined with my current data science focus at Bank of America, has uniquely prepared me to excel in daily risk reporting production, stakeholder management, and process automation.

At Deloitte's audit and controls divisions, I developed deep expertise in the exact responsibilities this role requires. As a Semi-Senior Auditor, I executed daily substantive testing procedures on core financial cycles—cash, receivables, revenue, fixed assets—for large-scale clients with \$10M-\$500M+ annual revenue. This daily production environment taught me the importance of timeliness, accuracy, and rigorous quality control. I performed detailed variance analysis investigating deviations from expected values, conducted financial reconciliations validating data completeness and correctness, and partnered with business stakeholders to resolve discrepancies prior to regulatory submission. As an Internal Control Consultant, I elevated this expertise by designing 20+ control mechanisms—including data validation controls, reconciliation procedures, and quality assurance checkpoints—across 20+ departments for tier-1 clients. I understand not just how to execute daily risk reporting production, but how to architect sustainable control environments that ensure ongoing data integrity and accuracy.

Currently at Bank of America, I am applying these financial reporting fundamentals combined with advanced technical capabilities. I manage data quality assessment across ~10GB financial datasets supporting daily operational reporting. I execute variance analysis procedures investigating deviations from expected metrics, coordinate with data providers across business units to resolve data quality gaps, and implement remediation procedures ensuring accuracy and completeness. Critically, I have designed and implemented SQL and Python automation to replace manual reconciliation and validation procedures—reducing manual effort by 95% while improving timeliness and reducing human error. I've built Tableau dashboards delivering automated risk metrics and quality indicators to senior stakeholders, demonstrating my ability to enhance the control environment through intelligent solutions. This combination of financial reporting rigor and technical automation expertise directly aligns with SIRR's mission to produce accurate, timely risk reporting while continuously improving operational efficiency.

The SIRR Operations role emphasizes daily risk report production, variance resolution, stakeholder management, data quality improvement, and process automation—capabilities I've developed and refined across four years of progressive experience. I bring demonstrated expertise in financial data quality management, variance investigation and resolution, reconciliation procedures, stakeholder collaboration, and regulatory compliance. Equally important, I have the technical foundation in SQL, Python, and Tableau to modernize reporting workflows and enhance efficiency. I understand the criticality of accurate risk reporting to JPMorgan Chase's risk management function and regulatory compliance, and I'm committed to executing daily production with precision while continuously seeking opportunities to improve processes through automation and intelligent solutions. Your emphasis on innovation and leveraging tools like Tableau, SQL, and Python to enhance efficiency resonates directly with my approach to technical problem-solving.

I am confident that my financial reporting foundation, risk data quality expertise, technical proficiency in SQL and Python, and passion for process improvement position me to make immediate and meaningful contributions to the SIRR Operations team. I welcome the opportunity to discuss how my audit, controls, and data science background supports JPMorgan Chase's risk reporting mission. Thank you for your consideration.

Sincerely,

Sikai Yang
